Summary

Senior Software Engineer with **8 years** of experience designing and shipping production systems across fintech, SaaS, and regulated industries. Built **payment processing infrastructure** handling multi-marketplace transactions, implemented **distributed data pipelines** processing millions of daily events, and led cross-functional teams through full product lifecycles. Delivered compliance-ready systems meeting **financial regulations**, managed **AWS cloud infrastructure** serving production traffic, and established automated testing practices across services. Seeking to apply distributed systems and payment expertise to international cash transfer infrastructure. Owns production infrastructure end to end, including on call coverage, deployment automation, and monitoring across distributed services. Comfortable partnering with platform and application teams on reliability work.

Core Skills

Languages and Frameworks: Python, TypeScript, Node.js, React, Django, Flask, Express.js, GraphQL, JavaScript, HTML, CSS, Java, Ruby

Data and Infrastructure: PostgreSQL, MongoDB, AWS, Docker, Kubernetes, Redis, Kafka, Celery

APIs and Integrations: REST APIs, OAuth2, JWT, payment gateway integration, webhooks, third-party platform connections

Payments and Security: Payment processing, Stripe integration, transaction security, fraud detection, financial compliance, secure coding

Practices and Methods: CI/CD pipelines, automated testing, Agile methodology, distributed systems architecture, full-stack development

Work Experience

Senior Software Engineer | Tackle.io | Remote | 03/2022 - Present

- Architected revenue intelligence platform processing **payment data** from multiple marketplaces including AWS Marketplace, Azure, and Salesforce AppExchange, building secure webhook handlers and reconciliation services that reduced manual reconciliation effort by **70%**.
- Designed distributed data pipeline handling over **1M events daily** using **Python**, **Kafka**, and **AWS Lambda**, implementing full observability with monitoring and alerting that improved incident response time by **40%**.
- Led migration of legacy marketplace integrations to modern **RESTful APIs** built with **TypeScript** and **Node.js**, improving maintainability and decreasing page load times from **5s to 3s**.
- Reduced cloud infrastructure costs by **30%** through containerization with **Docker** and orchestration via **Kubernetes**, optimizing resource allocation across staging and production environments.
- Established automated testing standards with **85% code coverage** across critical payment services, integrating CI/CD pipelines using GitHub Actions to enforce quality gates on all deployments.
- Mentored team of **5 engineers** on **React** frontend architecture and **Node.js** backend patterns, conducting regular code reviews and establishing engineering best practices for the department.
- Built real-time analytics dashboard using **React**, **GraphQL**, and **PostgreSQL** that consolidated marketplace revenue data, enabling stakeholders to access live reporting without engineering intervention.

Software Engineer | Tackle.io | Remote | 06/2021 - 03/2022

- Developed real-time data ingestion service processing over **10M records daily** using **Python** and **AWS Lambda**, migrating from batch processing to stream-based architecture that improved data latency by **80%**.

- Built backend APIs with **TypeScript**, **Node.js**, **Express**, and **GraphQL** to support marketplace listing management, reducing integration complexity for new platform partnerships.
- Implemented data quality monitoring system using **Python** and **Redis** that flagged inconsistencies across marketplace feeds, decreasing downstream data errors by **25%**.
- Collaborated with product team to define API specifications for Stripe payment integration, documenting endpoints and coordinating rollout across development squads.

Software Engineer II | Ultimate Medical Academy | Remote | 04/2019 - 06/2021

- Modernized student enrollment platform serving **30,000+ learners** by rebuilding core modules with **Django** and **React**, ensuring HIPAA compliance for handling protected health information.
- Built data synchronization service connecting LMS with third-party certifications systems using **Python** and **REST APIs**, eliminating manual data entry for **200+ monthly certifications**.
- Reduced report generation time from **30s to 3s** by optimizing **PostgreSQL** queries and implementing caching layer, improving user experience for administrative staff.
- Led migration of on-premise infrastructure to **AWS**, containerizing applications with **Docker** and setting up CI/CD pipeline that decreased deployment time from hours to minutes.

Software Engineer I | Ultimate Medical Academy | Remote | 08/2018 - 04/2019

- Created administrative dashboard with **Node.js** and **PostgreSQL** for managing course content and user permissions, reducing support tickets related to content management by **40%**.
- Participated in on-call rotation responding to production incidents, resolving service disruptions and documenting resolution procedures for future reference.
- Developed student portal features using **React** and **Django REST framework**, improving course completion rates by providing learners with real-time progress tracking.

SDK Intern | Accusoft | Remote | 06/2017 - 08/2018

- Developed SDK documentation and sample applications for image processing library, enabling developers to integrate document scanning capabilities into web applications.
- Built REST API wrappers in **JavaScript** for image manipulation endpoints, reducing integration time for new customers by **50%**.

Education

Bachelor of Science

University of South Florida | 2014 - 2018
