Summary

Senior Software Engineer with **8 years** of experience building distributed SaaS platforms and cloud-native applications. Led end-to-end development of multi-tenant systems at Tackle.io supporting 500+ ISV partners, and healthcare education platforms serving 50,000+ learners at Ultimate Medical Academy. Built core infrastructure using **Python**, **TypeScript**, **React**, **Node.js**, and **PostgreSQL** with **AWS** and **Docker** orchestration. Managed on-call rotations and incident response for production systems with five-nines uptime requirements. Seeking to apply full-stack engineering and cloud infrastructure expertise to AI cloud platform development at Nebius. Owns production infrastructure end to end, including on call coverage, deployment automation, and monitoring across distributed services. Comfortable partnering with platform and application teams on reliability work.

Core Skills

Languages: Python, TypeScript, JavaScript, Java, SQL, GraphQL

Frontend: React, Next.js, Angular, HTML/CSS, REST APIs

Backend: Node.js, Flask, Express, Django, FastAPI

Data: PostgreSQL, MongoDB, Redis, S3, Elasticsearch

DevOps: Docker, Kubernetes, AWS, CI/CD, GitHubActions, Terraform

Education

Bachelor of Science in Computer Science

University of South Florida

08/2014 - 05/2018

Work Experience

Senior Software Engineer | Tackle.io | Remote, US | 03/2022 - Present

- Architected and delivered a multi-tenant marketplace platform enabling 500+ independent software vendors to sell products through cloud marketplaces, handling 10,000+ concurrent transactions daily with sub-100ms API response times.
- Built partner onboarding and provisioning pipelines using **TypeScript**, **Node.js**, and **GraphQL**, reducing time-to-market for new vendor listings from two weeks to two days.
- Designed and implemented secure **REST APIs** with **OAuth2** and JWT authentication, serving 2 million+ daily requests while meeting enterprise compliance requirements for SOC 2 and GDPR.
- Led migration of monolithic services to **Kubernetes**-ran microservices on **AWS**, improving deployment frequency from monthly to daily releases with zero-downtime rollouts.
- Established observability practices with distributed tracing and centralized logging, cutting mean time to resolution for production incidents from 45 minutes to 12 minutes across a team of 5 engineers.
- Mentored four junior engineers through code review processes and technical design sessions, promoting adoption of TypeScript strict mode and automated testing standards that increased unit test coverage from 40% to 85%.

Software Engineer | Tackle.io | Remote, US | 06/2021 - 03/2022

- Developed core platform features using **React**, **Next.js**, and **Node.js** for the cloud marketplace listing and billing management system serving 200+ enterprise customers.
- Created automated billing reconciliation services processing \$2 million+ in monthly transactions, identifying discrepancies that saved \$50,000 in quarterly reconciliation errors.

- Integrated third-party payment providers and revenue recognition systems, implementing webhook-driven event processing that handled 5,000+ daily payment events with 99.99% reliability.
- Built self-service partner dashboards with real-time usage metrics and reporting, enabling vendors to monitor product performance without engineering support.

Software Engineer II | Ultimate Medical Academy | Remote, US | 04/2019 - 06/2021

- Modernized legacy PHP course delivery system to **Python/Flask** microservices serving 50,000+ active learners, achieving 40% reduction in page load times through caching and query optimization.
- Designed student assessment and grading modules handling 1,000+ concurrent users during peak enrollment periods with **PostgreSQL** connection pooling and horizontal scaling.
- Implemented compliance-driven data retention and audit logging systems for HIPAA and FERPA requirements, building immutable audit trails with **Elasticsearch** for regulatory reviews.
- Led a four-member team in migrating on-premises infrastructure to **AWS**, reducing annual hosting costs by \$80,000 while improving system availability to 99.9%.

Software Engineer I | Ultimate Medical Academy | Remote, US | 08/2018 - 04/2019

- Built course enrollment and student registration workflows with **React** and **Node.js**, processing 100,000+ enrollment transactions with 99.9% uptime.
- Developed interactive course content features including video streaming integration and adaptive quizzes, increasing student completion rates by 25%.
- Created internal admin tools for curriculum management and student progress tracking, reducing administrative workload by 15 hours weekly for the academic team.

SDK Intern | Accusoft | Remote, US | 06/2017 - 08/2018

- Developed documentation and code samples for the PrizmDoc document processing SDK in **JavaScript** and **Node.js**, reducing developer support tickets by 20%.
- Built integration examples and troubleshooting guides for enterprise customers implementing document viewing and conversion features across web applications.
