Summary

Senior Software Engineer with **8 years** of experience architecting and maintaining cloud-native platforms and enterprise-grade API ecosystems. Built and owned systems serving thousands of concurrent users across B2B SaaS, healthcare education, and developer tooling domains. Strong command of **Python**, **Node.js**, **AWS**, and **Kubernetes** with proven ability to optimize performance bottlenecks and strengthen security postures. Collaborates closely with product, infrastructure, and customer success teams to deliver reliable solutions that drive measurable business outcomes including **40% reduction in API latency** for critical workflows. Seeking to apply expertise in data integrity and distributed systems at scale.

Core Skills

Languages and Frameworks: TypeScript, JavaScript, HTML, CSS

Backend & APIs: Python, Node.js, REST, GraphQL, microservices, authentication/authorization

Cloud & Infrastructure: AWS, GCP, Docker, Kubernetes, serverless architectures

Data & Storage: PostgreSQL, MongoDB, Redis, data modeling, caching strategies

Observability & DevOps: CI/CD pipelines, Datadog, Splunk, Terraform, incident response, Jenkins, GitHub Actions

Work Experience

Senior Software Engineer | Tackle.io | Remote | 03/2022 - Present

- Architected and deployed multi-tenant API gateway handling **marketplace integrations** for 200+ ISV partners, reducing integration time from **3 weeks to 4 days** through standardized connector frameworks.
- Led migration of monolithic **Node.js** services to **Kubernetes**-ran **microservices** on **AWS EKS**, achieving 99.95% uptime and eliminating single points of failure across production environments.
- Designed and implemented **GraphQL** federation layer aggregating data from **AWS Redshift**, MongoDB, and third-party SaaS endpoints, enabling real-time dashboards for enterprise customers.
- Established security standards for OAuth2/JWT-based authentication across **REST APIs**, conducting code reviews and implementing rate limiting that prevented unauthorized access attempts.
- Reduced database query times by **40%** through query optimization, indexing strategies, and introduction of **Redis** caching layer for frequently accessed marketplace metadata.
- Mentored team of 5 engineers on **Python** best practices and distributed systems design, establishing RFC documentation process that improved cross-team alignment on feature specs.
- Partnered with infrastructure team to containerize legacy services using **Docker**, reducing deployment failures and enabling blue-green deployments across staging and production environments.

Software Engineer | Tackle.io | Remote | 06/2021 - 03/2022

- Developed webhook delivery system processing 50,000+ events daily with at-least-once guarantees and automatic retry logic, improving partner satisfaction scores by 25%.
- Built and maintained **Python** backend services powering **cloud marketplace** listing management, supporting integration with **AWS**, Azure, and GCP marketplaces.
- Participated in on-call rotation, triaging and resolving production incidents within SLA thresholds while maintaining detailed post-mortem records for continuous improvement.
- Authored comprehensive API documentation and SDK guides used by external developers, reducing support tickets related to integration questions.

Software Engineer II | Ultimate Medical Academy | Remote | 04/2019 - 06/2021

- Integrated third-party telehealth provider APIs to support live video consultations within the platform, coordinating with compliance team to ensure HIPAA requirements were met.
- Developed **healthcare compliance**-focused features for learning management system serving **30,000+ active students**, implementing FERPA-aligned data handling and audit logging.
- Optimized **PostgreSQL** queries and implemented connection pooling with PgBouncer, handling **500% increase in concurrent users** during pandemic-driven enrollment surge.
- Modernized legacy **ASP.NET** applications to **Node.js** microservices, improving response times and enabling horizontal scaling during peak enrollment periods.

Software Engineer I | Ultimate Medical Academy | Remote | 08/2018 - 04/2019

- Built student enrollment and course completion tracking modules using **Node.js** and **MongoDB**, reducing manual administrative overhead by 15 hours weekly.
- Implemented automated email notification system using scheduled jobs, improving student retention rates through timely intervention triggers.
- Collaborated with instructional designers to create SCORM-compliant course content delivery pipelines integrated with the main platform.

SDK Intern | Accusoft | Remote | 06/2017 - 08/2018

- Assisted in development of **C#** and **.NET** SDK components for document imaging library, writing unit tests and sample applications demonstrating SDK capabilities.
- Debugged and resolved customer-reported issues in image processing modules, gaining exposure to low-level bitmap manipulation and memory optimization techniques.

Education

Bachelor of Science

University of South Florida | 2014 - 2018
