Summary

Senior Software Engineer with **8 years** of experience building and scaling distributed systems across SaaS, healthcare, and developer tooling platforms. Led end-to-end ownership of **Kubernetes**-based infrastructure handling high-volume data workflows, implemented **CI/CD pipelines** reducing deployment cycles from days to under 30 minutes, and managed **Terraform** infrastructure across multi-cloud environments. Partners with platform and data teams to standardize observability patterns and cost-efficient compute resource allocation. Focus on building reliable **ML infrastructure** and data pipeline foundations for production workloads. Owns production infrastructure end to end, including on call coverage, deployment automation, and monitoring across distributed services. Comfortable partnering with platform and application teams on reliability work.

Core Skills

Infrastructure & Orchestration: Kubernetes, Docker, Terraform, Helm, AWS EKS, Azure AKS

CI/CD & DevOps: GitHub Actions, Jenkins, ArgoCD, Azure DevOps, Artifact Management

Data & Pipeline Engineering: Apache Airflow, Kafka, PostgreSQL, Redis, GraphQL, RESTful APIs

Observability & Monitoring: Datadog, Prometheus, Grafana, OpenTelemetry, ELK Stack

Languages & Frameworks: Python, Go, TypeScript, Node.js, Django, React, JavaScript, HTML, CSS, Bash

Work Experience

Senior Software Engineer | Tackle.io | Remote | 03/2022 - Present

- Architected and deployed multi-tenant SaaS platform on **Kubernetes** clusters serving 200+ marketplace partners, implementing auto-scaling policies that handle 3x traffic spikes during peak billing cycles.
- Built and maintained **CI/CD pipelines** using **GitHub Actions** and **ArgoCD**, reducing deployment frequency from bi-weekly releases to multiple daily deployments with zero-downtime rollouts.
- Implemented **Apache Airflow** workflows processing 50K+ daily transactions for partner revenue attribution, reducing data latency from 4 hours to near real-time ingestion.
- Established observability stack with **Datadog** and **Prometheus**, creating SLO dashboards that reduced mean time to detection for production incidents by 60%.

Software Engineer | Tackle.io | Remote | 06/2021 - 03/2022

- Optimized **PostgreSQL** query performance for reporting dashboards, implementing indexing strategies that decreased report generation time from 8 seconds to under 1 second.
- Built automated testing frameworks using **Pytest** and **Playwright** achieving 85% code coverage, reducing production bugs reported by customer success by 30%.
- Designed and implemented **RESTful APIs** with **GraphQL** integration for marketplace listing management, supporting CRUD operations across 150+ third-party integrations.
- Developed internal tooling in **Python** to automate partner onboarding workflows, eliminating manual provisioning for 20+ hours per quarter.

Software Engineer II | Ultimate Medical Academy | Remote | 04/2019 - 06/2021

- Modernized legacy student management system by migrating from on-premises infrastructure to **Azure cloud**, implementing **Azure DevOps** pipelines that reduced deployment time by 70%.
- Developed **React** front-end components for student portal serving 40,000+ enrolled learners, implementing lazy loading and code splitting that improved initial page load by 50%.
- Led initiative to containerize application stack with **Docker**, creating standardized development environments that eliminated "works on my machine" issues across 12 developers.
- Built **CI/CD pipelines** for continuous compliance in healthcare regulatory environment, automating HIPAA security scanning in pre-production stages.

Software Engineer I | Ultimate Medical Academy | Remote | 08/2018 - 04/2019

- Implemented **RESTful APIs** for course enrollment and assessment tracking using **Django REST Framework**, supporting 5,000+ concurrent student sessions during peak registration periods.
- Created automated data sync jobs between learning management systems using **Python** and **PostgreSQL**, reducing manual data entry by 15 hours weekly.
- Integrated third-party payment processing with **Stripe API**, building secure webhooks that processed \$2M+ in tuition payments with zero failed transactions.

SDK Intern | Accusoft | Remote | 06/2017 - 08/2018

- Built automated testing suite for image processing APIs using **C#** and **NUnit**, increasing test coverage from 60% to 92% across core SDK components.
- Developed code samples and documentation for **.NET SDK** integration demonstrating document processing capabilities to 500+ enterprise developers.

Education

Bachelor of Science in Computer Science

University of South Florida

08/2014 - 05/2018
