Summary

Senior Software Engineer with **8 years** of experience building scalable backend systems and multi-tenant SaaS platforms. Expertise in **Python**, **FastAPI**, and **RESTful API** development with strong focus on security, observability, and cloud infrastructure. Led development of platform services supporting **2,000+ cloud marketplace partners** with **SOC 2 Type II** compliance. Built event-driven architectures handling **5,000+ messages daily** and optimized database performance achieving 40% reduction in response times. Background includes healthcare education platforms serving **30,000+ students** with HIPAA compliance requirements. Seeking to drive backend development for AI workflows and agentic platforms with focus on LLM integration, cost controls, and multi-tenant architecture.

Core Skills

Languages and Frameworks: Python, FastAPI, Flask, Node.js, React, SQLAlchemy, TypeScript, JavaScript, HTML, CSS

Cloud and Infrastructure: AWS (EC2, S3, SQS, SNS, RDS, Lambda), GCP, Kubernetes

Databases and Storage: PostgreSQL, Redis, SQL, ORM

Security and Compliance: OAuth2, JWT, SOC 2, HIPAA, RBAC, audit logging, encryption

Observability and DevOps: monitoring, alerting, CI/CD, event-driven architecture, distributed tracing, Terraform

Experience

Senior Software Engineer | Tackle.io | 03/2022 - Present

- Designed multi-tenant SaaS platform architecture supporting **2,000+ cloud marketplace partners**, processing millions in annual GMV with strict data isolation and **SOC 2 Type II** compliance requirements across all services.
- Developed and secured **RESTful APIs** with **OAuth2** and JWT authentication for partner onboarding, billing, and revenue operations using **PostgreSQL** and **Redis** for data consistency.
- Built event-driven notification system using **AWS SQS** and **SNS** for real-time partner alerts and asynchronous processing, handling over **5,000 messages daily** across marketplace workflows.
- Implemented **Datadog** monitoring and alerting pipelines, reducing incident detection time by 50% and maintaining **99.9% uptime** across all production services.
- Conducted security reviews and vulnerability assessments with external auditors, resolving critical findings before **SOC 2 audit** completion and penetration testing cycles.
- Developed custom reporting dashboards with **React** and **Node.js** for partner insights, enabling data-driven decisions for revenue operations teams.
- Led migration of legacy services to containerized **Kubernetes** and **Docker** microservices architecture, improving deployment frequency and system resilience.
- Contributed to API gateway design and rate limiting implementations protecting platform endpoints from abuse while maintaining partner integration quality.

Software Engineer | Tackle.io | 06/2021 - 03/2022

- Built platform services supporting cloud marketplace integrations with major providers using **Python**, **PostgreSQL**, and **AWS** infrastructure components.
- Developed API endpoints for partner management workflows with proper authentication, data validation, and error handling standards.
- Participated in code reviews and implemented automated tests improving overall code coverage and reducing production defects by 25%.

- Collaborated with cross-functional teams including product, sales, and operations to deliver features for cloud marketplace automation platform.

Software Engineer II | Ultimate Medical Academy | 04/2019 - 06/2021

- Implemented **HIPAA**-compliant data handling with role-based access control and comprehensive audit trails for healthcare education platform serving **30,000+ students**.
- Built real-time notification system using **Flask-SocketIO** for live student progress tracking, reducing average course completion time by 15% across programs.
- Optimized **PostgreSQL** database performance through query analysis and indexing strategies, achieving 40% reduction in API response times during peak loads.
- Mentored team of 5 engineers on Python development best practices, code review standards, and test-driven development methodologies.

Software Engineer I | Ultimate Medical Academy | 08/2018 - 04/2019

- Developed backend APIs using **Python** and **Flask** for student enrollment and course management with secure data handling patterns.
- Integrated third-party payment processing with PCI-compliant transaction handling for tuition payments across multiple programs.
- Built administrative dashboards for content management and student performance analytics using **React** and **Node.js** stack.

SDK Intern | Accusoft | 06/2017 - 08/2018

- Developed **Python SDK** for document processing APIs with comprehensive documentation and working code samples for developer integration.
- Created automated testing framework with **pytest** achieving 80% code coverage across SDK components.

Education

Bachelor of Science

Computer Science

University of South Florida

08/2014 - 05/2018
