Summary

Senior Software Engineer with **8 years** of experience building scalable, cloud-native applications across EdTech, SaaS, and developer tools. Led end-to-end development of microservices architectures on **AWS**, implementing CI/CD pipelines and automation frameworks that reduced infrastructure costs. Developed and secured RESTful APIs with OAuth2 and JWT authentication, ensuring SOC 2 compliance for enterprise clients. Mentored engineering teams on code quality and security best practices. Collaborated with cross-functional teams to deliver platform features serving thousands of concurrent users. Seeking to bring full-stack expertise and automation-first mindset and reliability engineering principles to a cybersecurity-focused engineering team.

Core Skills

Languages & Frameworks: Python, JavaScript, TypeScript, React, Node.js, Java, HTML, CSS

Cloud & DevOps: AWS, Docker, Kubernetes, Terraform, CI/CD, Linux

Databases & APIs: PostgreSQL, REST APIs, GraphQL, Redis, Microservices

Security & Practices: OAuth2, SAML 2.0, Agile, Code Review, Technical Leadership, MySQL

Work Experience

Senior Software Engineer | Tackle.io | Remote, US | 03/2022 - Present

- Architected and deployed microservices on AWS EKS, improving system reliability and reducing deployment times from hours to under 15 minutes through automated scaling policies and CI/CD automation for the cloud sales platform.
- Developed and secured RESTful APIs with OAuth2 and JWT authentication, ensuring compliance with SOC 2 requirements for enterprise customers in the SaaS space, supporting deal flows exceeding \$100M annually.
- Led migration of monolithic application to containerized architecture using Docker and Kubernetes, resulting in 40% reduction in infrastructure costs and enabling horizontal scaling for traffic spikes during peak sales cycles.
- Implemented CI/CD pipelines with GitHub Actions and Terraform, automating infrastructure provisioning across development, staging, and production environments with zero manual intervention, reducing environment setup time from days to minutes.
- Mentored team of 5 engineers on best practices in code quality, test coverage, and security standards, establishing code review processes that decreased production bugs by 25%.
- Designed real-time data processing pipelines using Kafka and PostgreSQL, handling over 1M events daily and providing actionable insights for sales teams through dashboards and automated reporting.
- Collaborated with product team to define technical roadmap and prioritize infrastructure initiatives, aligning engineering efforts with business objectives for Q4 launch of the enterprise marketplace feature.
- On-call rotation for production systems, resolving critical incidents with 99.9% uptime compliance and implementing automated failover mechanisms that reduced MTTR from 45 minutes to under 10 minutes for the high-availability platform.

Software Engineer | Tackle.io | Remote, US | 06/2021 - 03/2022

- Built dynamic pricing engine using React and Node.js, integrating with Salesforce CRM to automate deal configurations and approvals for channel partners, processing 500+ deals monthly.
- Implemented GraphQL API layer to unify data from multiple sources, improving frontend query performance by 60% and reducing page load times for users from 8 seconds to under 3 seconds.

- Developed automated testing suite achieving 85% code coverage, reducing production bugs by 30% and enabling confident weekly deployments of core features without service interruptions.
- Participated in architecture reviews and contributed to API design standards for new platform features, establishing consistency across 12 microservices and improving system interoperability.

Software Engineer II | Ultimate Medical Academy | Remote, US | 04/2019 - 06/2021

- Developed HIPAA-compliant web applications using Python Django and React, serving 50,000+ students and healthcare professionals with secure access to educational content and certification tracking.
- Designed and implemented backend services for course management and student tracking systems, improving enrollment processing efficiency by 35% and reducing manual data entry errors through automated workflows.
- Led migration of legacy PHP codebase to modern JavaScript stack, improving page load times by 3x and enhancing user experience for mobile users on low-bandwidth connections.
- Implemented SSO authentication using SAML 2.0 and OAuth2, enhancing security for healthcare education platform and streamlining user access across 15+ institutional partners and healthcare systems.

Software Engineer I | Ultimate Medical Academy | Remote, US | 08/2018 - 04/2019

- Built student enrollment portal features using JavaScript and PostgreSQL, reducing enrollment processing time from 10 days to 3 days for new applicants through automated form validation and workflow triggers.
- Participated in Agile sprints, contributing to weekly releases of core platform functionality and supporting a team of 4 developers in an iterative development environment with continuous integration.
- Developed API integrations with third-party educational tools and payment processors, enabling smooth data exchange and transaction processing for course purchases, supporting 200+ daily transactions.

SDK Intern | Accusoft | Remote, US | 06/2017 - 08/2018

- Resolved technical support tickets related to SDK integration, improving customer satisfaction scores from 3.2 to 4.6 out of 5 through timely and accurate responses to developer inquiries.
- Developed SDK documentation and sample applications for image processing APIs in C# and Java, reducing customer integration time by 40% through comprehensive guides and working examples.

Education

Bachelor of Science

Computer Science

University of South Florida

08/2014 - 05/2018
