Summary

Senior Software Engineer with **8 years** of experience designing and operating cloud-native platforms, building CI/CD pipelines, and managing Kubernetes infrastructure at scale. At a B2B SaaS company, owned end-to-end infrastructure for a cloud marketplace serving enterprise customers, reducing deployment lead times by 60%. Implemented GitOps workflows and observability stacks across multi-cloud environments. Collaborated with 5+ engineering teams to establish platform standards. Seeking to leverage expertise in cloud architecture, site reliability, and platform engineering to accelerate development velocity. Owns production infrastructure end to end, including on call coverage, deployment automation, and monitoring across distributed services. Comfortable partnering with platform and application teams on reliability work.

Core Skills

Languages and Frameworks: JavaScript, HTML, CSS

Cloud Platforms: AWS, Azure, Kubernetes, Docker, Terraform, Helm

CI/CD & DevOps: Azure DevOps, GitHub Actions, ArgoCD, GitOps, Jenkins, Ansible

Programming: Python, Go, Java, TypeScript, Bash, SQL

Observability: Datadog, Prometheus, Grafana, ELK Stack, PagerDuty

Experience

Senior Software Engineer | Tackle.io | 03/2022 - Present

- Owned cloud infrastructure for a B2B SaaS marketplace platform, designing Kubernetes-based deployment architectures across multiple cloud regions to support 500+ enterprise customer integrations.
- Implemented GitOps workflows using **ArgoCD** and **Helm**, reducing deployment lead times from days to under 30 minutes for 50+ microservices across 3 environments.
- Built centralized logging and monitoring stack with **Datadog** and **Prometheus**, establishing SLOs and automated alerts that decreased mean time to resolution from 45 minutes to 8 minutes.
- Architected zero-trust network policies in **Kubernetes** clusters, implementing mTLS and RBAC controls that eliminated unauthorized pod-to-pod communication in production namespaces.
- Developed Python automation tooling for infrastructure provisioning, enabling on-call engineers to spin up staging environments in under 5 minutes compared to 2-day manual processes.
- Led migration of legacy monolithic services to containerized **microservices**, improving resource utilization by 40% and reducing infrastructure costs by \$120K annually.
- Established CI/CD standards and conducted security reviews for infrastructure changes, maintaining 99.95% uptime across all production services over an 18-month period.
- Mentored team of 4 engineers on **Kubernetes** operations and **Terraform** best practices, establishing runbooks and reducing onboarding time for new platform team members.

Software Engineer | Tackle.io | 06/2021 - 03/2022

- Maintained and enhanced CI/CD pipelines in **Azure DevOps**, supporting 100+ daily builds and deployments across multi-tenant SaaS platform environments.
- Implemented automated testing frameworks integrated into pipeline stages, catching 25% of defects before production deployment and reducing rollback incidents.

- Configured **Terraform** modules for Azure resource provisioning, enabling reproducible infrastructure deployments that decreased environment setup time from 3 days to under 1 hour.
- Supported incident response and on-call rotations for production platform, resolving 30+ critical issues with average customer impact under 15 minutes per incident.

Software Engineer II | Ultimate Medical Academy | 04/2019 - 06/2021

- Modernized web platform infrastructure by migrating on-premises applications to **AWS**, achieving 99.9% availability and reducing infrastructure operational costs by \$80K annually.
- Implemented HIPAA-compliant data pipelines using **Python** and **PostgreSQL**, processing enrollment data for 15,000+ students while maintaining regulatory compliance.
- Built automated backup and disaster recovery solutions for learning management systems, ensuring business continuity with RTO under 30 minutes and RPO under 5 minutes.
- Developed internal dashboard applications with **TypeScript** and **React**, enabling staff to manage course content and student records without engineering support.

Software Engineer I | Ultimate Medical Academy | 08/2018 - 04/2019

- Supported **AWS**-hosted learning management platform serving 8,000+ concurrent users during peak enrollment periods with 99.5% uptime.
- Automated routine administrative tasks using **Python** scripts, saving 20+ hours per month of manual work for operations team.
- Assisted in containerization efforts, packaging legacy applications with **Docker** for local development and testing environments.

SDK Intern | Accusoft | 06/2017 - 08/2018

- Developed automated test suites in **Python** for document imaging SDKs, increasing test coverage by 30% and reducing QA cycle time for release candidates.
- Created sample applications and documentation for developers integrating document processing SDKs, decreasing support tickets related to integration questions by 15%.

Education

Bachelor of Science in Computer Science

University of South Florida | 2014 - 2018
