Summary

Senior Software Engineer with **8 years** of experience designing and delivering scalable cloud platforms and automating complex workflows. Currently at Tackle.io, leading development of multi-tenant SaaS solutions with focus on **AWS** infrastructure, **Kubernetes** orchestration, and **CI/CD pipeline** optimization. Previously built healthcare learning management systems at Ultimate Medical Academy, implementing secure **RESTful APIs** and automated testing frameworks. Provided technical mentorship and conducted code reviews for teams of 3-5 engineers. Demonstrated expertise in **DevOps** culture adoption, infrastructure as code, and monitoring solutions that improved system reliability by reducing incident response times. Skilled in **Python**, Node.js, and cloud-native technologies with a history of building high-performance systems.

Core Skills

Cloud & DevOps: AWS, Kubernetes, Docker, GitLab CI, Terraform, CI/CD

Languages & Frameworks: Python, JavaScript, Node.js, RESTful APIs, GraphQL, TypeScript, HTML, CSS, SQL

Operating Systems & Infrastructure: Linux, Windows Server, Bash, Infrastructure as Code

Tools & Practices: Agile/Scrum, Git, Jira, Monitoring & Logging, Security Best Practices, Ansible, Prometheus, Grafana

Work Experience

Senior Software Engineer | Tackle.io | Remote, US | 03/2022 - Present

- Designed and deployed cloud-native microservices architecture on **AWS EKS**, reducing latency and improving throughput to handle 30+ million requests daily across production environments, ensuring high availability and fault tolerance.
- Built and maintained comprehensive **GitLab CI/CD** pipelines for 10+ microservices, implementing automated testing and deployment strategies that cut release time from 5 minutes to under 90 seconds reliably.
- Implemented infrastructure as code using **Terraform** to automate provisioning and management of development, staging, and production environments on Linux servers across 3 **AWS** availability zones, reducing manual setup time by 4 hours per environment.
- Developed **Python**-based automation scripts to monitor system health metrics and trigger real-time alerts via Slack and PagerDuty, decreasing incident detection time from 10 minutes to under 1 minute.
- Collaborated with a 5-member cross-functional team to migrate a monolithic application to containerized microservices architecture on **Kubernetes**, significantly improving overall scalability and fault isolation and resilience in production.
- Secured **RESTful APIs** with **OAuth2** and JWT-based authentication mechanisms, implementing role-based access control and ensuring compliance with data protection standards for enterprise clients across multiple regions and industries.
- Mentored 2 junior engineers through regular code reviews, pair programming sessions, and structured learning paths, contributing to a 20% improvement in team overall delivery velocity across multiple projects.
- Led migration of legacy database to **PostgreSQL**, implementing efficient indexing strategies and query optimization that improved performance and supported 5000+ concurrent users during peak hours without downtime.

Software Engineer | Tackle.io | Remote, US | 06/2021 - 03/2022

- Developed and maintained **Python** Flask APIs for a multi-tenant SaaS platform, serving 200+ business clients with 99.9% uptime and handling peak loads of 1000 requests per second reliably.

- Integrated third-party payment gateways including Stripe and PayPal, automating billing workflows and subscription management that reduced manual invoice processing time by 3 hours weekly for the finance team.
- Wrote comprehensive automated unit and integration tests using **Pytest** and coverage tools, achieving 80% code coverage across critical services and reducing production bugs by 25% for each release.
- Configured and managed **AWS S3** buckets and CloudFront distributions on Linux-based EC2 instances for efficient static asset delivery, implementing caching strategies that improved page load times by 40%.

Software Engineer II | Ultimate Medical Academy | Remote, US | 04/2019 - 06/2021

- Designed and implemented **RESTful APIs** using Node.js and Express to support a learning management system serving 50,000+ active students, optimizing database queries for real-time performance on Linux servers.
- Migrated on-premise infrastructure to **AWS EC2** and **RDS** instances, reducing operational costs by 30% and improving system reliability to 99.5% uptime through automated monitoring and scaling policies for the platform.
- Implemented automated data backup and disaster recovery solutions using **AWS S3** versioning and RDS snapshots, ensuring compliance with HIPAA healthcare data regulations and reducing RPO to 1 hour.
- Led development of interactive course content features using **React** and Redux, implementing video streaming and quiz modules that increased student engagement metrics by 25% across the platform.

Software Engineer I | Ultimate Medical Academy | Remote, US | 08/2018 - 04/2019

- Developed data analytics dashboards with **SQL** and **PostgreSQL**, creating custom reports and visualizations that provided actionable insights into student performance metrics for 30+ course administrators across departments.
- Built student enrollment workflows using **Python** and Django, processing 500+ registrations daily with automated email notifications and enrollment confirmation and integrating with CRM systems for lead tracking.
- Created automated end-to-end testing framework using Selenium WebDriver, reducing QA cycle time by 2 days per release and improving confidence in deployment releases for the development team.

SDK Intern | Accusoft | Remote, US | 06/2017 - 08/2018

- Identified and fixed bugs in the document processing library while implementing performance optimizations that achieved 20% faster rendering speeds for high-resolution images and improving overall library stability for production use.
- Developed comprehensive **C#** SDK documentation and code samples for the Image API suite, including tutorials and API references that reduced customer onboarding time by 50% for developers.

Education

Bachelor of Science in Computer Science

University of South Florida

08/2014 - 05/2018
