Summary

Senior Full Stack Engineer with **8 years** delivering end-to-end platforms for real-estate financing, e-commerce, and SaaS solutions. Owned the core loan processing system serving 12,000 active users, built on **Java**, **Spring**, **React**, **PostgreSQL** and **Docker**. Cut transaction latency by 35 % while partnering with major lenders and property data providers. Led cross-functional squads across US and Asia time zones, writing clear documentation and establishing async communication protocols that reduced handoff delays by 20 %. Currently driving secure, on-call integration pipelines and preparing to focus on healthcare EHR connectivity.

Core Skills

Languages and Frameworks: Python

Backend Development: Java, Spring Boot, REST, GraphQL, PostgreSQL, MySQL

Frontend Development: React, TypeScript, JavaScript, HTML5, CSS3, Redux

Cloud & DevOps: Docker, Kubernetes, AWS, Git, CI/CD, Jenkins

Data & Integration: OAuth2, Stripe, API Design, Async Messaging, PostgreSQL, GraphQL, Terraform, GitHub Actions, Redis

Work Experience

Education

Bachelor of Science in Computer Science

University of North Texas | 2014 - 2018

FrontDoor, Senior Full Stack Engineer (09/2022 - Present)

- Designed and shipped a microservice for loan underwriting using **Java** and **Spring Boot**, handling 1,200 requests per minute for the core financing workflow and cutting processing time from 4 s to 2.5 s.
- Implemented a real-time **React** dashboard with **TypeScript** that visualized portfolio risk metrics across the platform, increasing weekly active sessions by 18 %.
- Containerized the entire platform with **Docker** and ran deployments on **Kubernetes**, achieving 99.95 % uptime for critical financial services across production clusters.
- Built CI/CD pipelines in **GitHub Actions** integrating automated security scans and unit test suites for the platform, reducing release cycle from weekly to bi-daily.
- Led on-call rotation, diagnosing production incidents and restoring services within an average of 12 minutes across all microservices, consistently meeting SLA requirements and documenting root-cause analyses for future prevention.
- Migrated legacy data stores to **PostgreSQL** for the loan processing engine, consolidating schemas and introducing partitioning, which improved query performance by 40 % and reduced storage costs by \$15 K annually.

ZenBusiness, Full Stack Developer (01/2021 - 11/2022)

- Developed a multi-tenant onboarding API using **Java** and **Spring MVC**, supporting 3,500 new business registrations per month and decreasing average onboarding time from 6 minutes to 3 minutes through optimized validation logic.
- Created a responsive **React/TypeScript** client portal that allowed users to manage filings, resulting in a 22 % increase in self-service transactions within the first quarter and reducing support tickets by 15 %.

- Integrated **Stripe** payment processing with secure **OAuth2** flows, handling \$2 M monthly volume for subscription and one-time purchases across the platform and achieving PCI-DSS compliance without external vendor reliance.
- Automated deployment of containerized services using **Docker** and **AWS ECS**, cutting provisioning time from hours to minutes and enabling zero-downtime releases for over 30 microservices supporting critical tax filing features.

Northstar Software Development, Full Stack Engineer (11/2020 - 06/2021)

- Engineered a full-stack applicant tracking system using **Node.js**, **Express**, and **React** for enterprise clients, processing 8,000 job applications monthly and improving recruiter response time by 30 % through real-time status updates.
- Implemented **GraphQL** endpoints for candidate data retrieval across the hiring dashboard, reducing payload size by 45 % and decreasing front-end load times from 2.3 s to 1.1 s.
- Set up CI pipelines with **Jenkins** and **Docker**, enabling automated testing and container builds for each pull request that cut integration testing duration from 45 minutes to 12 minutes.
- Collaborated with UI/UX designers to revamp the candidate portal, introducing responsive design principles across all browsers that boosted mobile usage by 40 % and lowered bounce rates.

Arbisoft, Software Engineer (10/2018 - 08/2020)

- Developed the FixAlert monitoring tool using **Python** and **Flask**, enabling real-time alerting for 150+ client applications across the SaaS platform and decreasing mean time to detection by 50 %.
- Integrated third-party APIs for SMS and email notifications, handling 200,000 messages monthly for critical incident response and user onboarding workflows and ensuring 99.9 % delivery reliability.
- Wrote comprehensive unit and integration tests with **pytest** for the core alerting engine, achieving 85 % code coverage and reducing regression bugs by 60 % during releases.
- Participated in agile sprint planning and daily stand-ups, contributing to backlog grooming for the development team that improved story point estimation accuracy by 25 %.
