

Nathan Hershey

Round Rock, TX | nathanhershey047@gmail.com | 937-326-3137
<https://www.linkedin.com/in/nathan-hershey-436209388>

Core Skills

Languages & Scripting: TypeScript, JavaScript, HTML, CSS, SQL, Python

Systems & Networking: AWS

Automation & CI/CD: Ansible, Terraform

Data & Containers: Docker, Kubernetes, Postgres, MongoDB, Redis

Work Experience

Education

Bachelor of Science in Computer Science

University of North Texas | 2014 - 2018

FrontDoor, Senior Full Stack Engineer (09/2022 - Present)

- Designed a **Python/Flask** API layer for a real-estate financial platform, supporting 1.2 M daily requests and reducing average response time by 35 %.
- Implemented **PostgreSQL** sharding and **Redis** caching, cutting query latency from 250 ms to 150 ms across critical loan-processing services.
- Built end-to-end CI/CD pipelines with **Docker** and **Kubernetes**, achieving daily deployments without service interruption.
- Integrated **Elasticsearch** for full-text search across property listings, increasing search relevance scores by 22 %.
- Automated infrastructure provisioning using **Terraform** and **Ansible**, reducing environment spin-up time from hours to minutes.
- Led on-call rotation and introduced kernel-level tracing, decreasing mean time to resolution from 45 min to 18 min.
- Collaborated with product and data teams to prototype a recommendation engine, laying groundwork for future AI-enhanced features.

ZenBusiness, Full Stack Developer (01/2021 - 11/2022)

- Refactored legacy monolith into **Node.js** microservices, improving scalability and enabling independent deployment of five core features.
- Created a **React** front-end module for user onboarding, boosting completion rates by 12 %.
- Optimized **MongoDB** indexes for transaction logs, cutting read latency by 30 %.
- Established **Docker**-based local development environments, reducing onboarding time for new engineers by 40 %.
- Partnered with security team to embed JWT authentication across APIs, enhancing data protection without impacting performance.

Northstar Software Development, Full Stack Engineer (11/2020 - 06/2021)

- Developed a **Python** task scheduler using **TaskTiger**, handling asynchronous job processing for an ATS platform.
- Implemented **React** UI components for candidate tracking, decreasing user navigation steps by 20 %.
- Integrated **Redis** session store, improving session reliability during peak traffic spikes.
- Automated database migrations for **PostgreSQL**, ensuring zero-downtime releases.
- Coordinated with QA to introduce automated end-to-end tests, raising test coverage to 85 %.

Arbisoft, Software Engineer (10/2018 - 08/2020)

- Built RESTful services in **Java** and **Spring** for a healthcare alert system, supporting 200 K concurrent users.
- Designed **React** dashboards for real-time monitoring, reducing incident detection time by 25 %.
- Implemented **MySQL** replication strategy, achieving 99.9 % data availability.
- Created CI pipelines with **Jenkins** and **Docker**, cutting build times by half.
- Provided on-call support and kernel-level debugging for production issues, maintaining SLA compliance.
