Summary

Senior Full Stack Engineer with **8 years** delivering end-to-end web platforms for finance, e-commerce, and SaaS domains. Owned the design and on-call operation of a high-throughput loan underwriting system, an inventory management portal, and a real-time analytics dashboard. Expert in **React**, **Node.js**, **AWS**, **Docker** and **PostgreSQL**. Cut average API response time by 40% while supporting cross-functional product, security and data partners. Led cross-team sprint planning, introduced automated testing pipelines, and mentored junior engineers to uphold code quality and reliability. Owns production infrastructure end to end, including on call coverage, deployment automation, and monitoring across distributed services. Comfortable partnering with platform and application teams on reliability work.

Core Skills

Programming Languages: JavaScript, TypeScript, Python, SQL, HTML, CSS

Frameworks: React, Node.js, Express, FastAPI

Cloud&DevOps: AWS, Docker, Kubernetes, CI/CD

Databases&Storage: PostgreSQL, MySQL, Redis, ElasticSearch

Education

Bachelor of Science in Computer Science

University of North Texas | 2014 - 2018

Work Experience

FrontDoor, SeniorFullStackEngineer(09/2022 - Present)

- Designedandlaunchedamicroservice-basedpropertyfinanceplatformhandlingover200,000dailytransactions,using**Node.js**, **Express**,and**AWSLambda**,andimprovedsystemscalabilityacrossthreeavailabilityzones.
- Implementedend-to-endCI/CDpipelineswith**Docker**and**GitHubActions**,enablingdailydeployment sandreducingreleaseleadtimefrom48hourstounder4hourswhilemaintaining100%testcoverageand zeroproductionincidents.
- Migratedlegacymonolithtocontainerizedserviceson**Kubernetes**,achievinga50%reductionininfrast ructurecostandimprovingfaulttoleranceacrosstheplatformthroughautomatedhealthchecksandhori zontalpodautoscaling.
- Collaboratedwithproduct,security,anddatateamstodefineAPIcontracts,introducing**OpenAPI**specif icationsthatstreamlinedintegrationtestingandcutonboardingtimefornewpartnersby40%andensure dcompliancewithindustrystandards.
- Ledateamof5engineersin**on-call**rotation,establishing**runbooks**thatreducedmeantimetoresolutio nfrom2hoursto30minutesandimprovedpost-mortemanalysisaccuracy.
- Optimizeddatabasequeriesin**PostgreSQL**,decreasingaveragereportgenerationtimefrom12secon dsto3secondsbyintroducingindexedviewsandconnectionpoolingacrossmultipleservices.

ZenBusiness, FullStackDeveloper(01/2021 - 11/2022)

- Builtaself-servicebusinessformationportalusing**React**and**Node.js**, serving over 50,000 users and increasing conversion rates by 22% through responsive design, real-time validation, and integrated payment processing.

- Engineered RESTful APIs with **Express** and **PostgreSQL**, handling 1.2 million monthly requests and achieving 99.9% uptime while implementing rate limiting, comprehensive logging, and automated backups to ensure data integrity.
- Introduced automated test suites using **Jest** and **Supertest**, reducing regression defects by 40% and shortening QA cycles, and enabling continuous integration pipelines that validated code on every pull request.
- Migrated legacy data import jobs to **Python** scripts with **AWSS3** storage, cutting processing time from 45 minutes to under 5 minutes and decreasing operational costs by 30% through serverless execution.
- Coordinated with compliance and legal teams to embed KYC workflows, ensuring regulatory adherence across 3 jurisdictions by integrating third-party verification APIs and maintaining audit logs, which facilitated smooth audits.

Northstar Software Development, Full Stack Engineer (11/2020 - 06/2021)

- Developed a real-time applicant tracking dashboard with **Angular** and **Node.js**, improving recruiter response time by 18% through live status updates, customizable filters, and integrated email notifications, supporting over 200 hiring teams.
- Implemented secure OAuth2 authentication flow using **Passport.js**, reducing unauthorized access incidents to zero and simplifying user provisioning across multiple client organizations, which enhanced compliance reporting while maintaining a single sign-on experience.
- Created automated email templates with **Handlebars** and **SendGrid**, increasing candidate communication efficiency by 30% and reducing manual effort for HR staff, enabling batch processing of over 10,000 messages per week.
- Optimized database indexing in **MySQL**, cutting query latency for candidate searches from 2 seconds to 0.4 seconds and supporting concurrent load of 500+ users, which improved overall system throughput during peak recruitment cycles.
- Provided **on-call** support and incident triage, documenting resolutions that decreased repeat incidents by 25% and establishing a knowledge base that accelerated troubleshooting for the engineering team across three product lines.

Arbisoft, Software Engineer (10/2018 - 08/2020)

- Contributed to the FixAlert monitoring tool, building backend services with **Java** and **Spring Boot**, handling 1 million alerts per month and integrating with Slack and email notifications, which improved incident response times by 15%.
- Implemented RESTful APIs using **Spring MVC**, enabling third-party integrations and supporting over 30 client applications while ensuring compliance with OAuth2 standards and providing detailed Swagger documentation for developers.
- Designed and maintained CI pipelines with **Jenkins**, reducing build times by 40% and increasing deployment frequency through parallel stages, automated testing, and container image caching, which supported rapid feature delivery.
- Optimized SQL queries in **PostgreSQL**, decreasing report generation time from 10 seconds to 2 seconds and reducing server load, which allowed scaling to 5 times more concurrent users during peak periods.
- Provided **on-call** support for production incidents, documenting root causes and implementing preventive fixes that lowered downtime by 30% while coordinating with QA and operations teams to ensure rapid rollback procedures and improve service reliability.
