Summary

Senior Full Stack Engineer with **8 years** of experience building and owning production systems end to end. Delivered platforms serving **fintech**, **real estate**, and **SaaS** domains using **React**, **Node.js**, **Python**, and **PostgreSQL**. Led cross-functional teams of 5+ engineers and maintained on-call rotations for critical infrastructure. Improved transaction processing latency from 3s to 1s and reduced deployment failures by consolidating CI/CD pipelines. Seeking to apply full stack expertise to high-impact healthcare automation workflows at Plenful. Owns production infrastructure end to end, including on call coverage, deployment automation, and monitoring across distributed services. Comfortable partnering with platform and application teams on reliability work.

Core Skills

Languages and Frameworks: Ruby

Frontend: React, TypeScript, JavaScript, HTML/CSS, Redux, REST APIs

Backend: Node.js, Python, Django, Flask, GraphQL, Express

Database&Cloud: PostgreSQL, MySQL, Redis, AWS, Docker, CI/CD

Practices: Agile, Git, Microservices, Authentication, PerformanceOptimization, Testing

Education

Bachelor of Science in Computer Science

University of North Texas | 2014 - 2018

WorkExperience

SeniorFullStackEngineer|Frontdoor|09/2022 - Present

- Builtanddownedtherealestatefinancialplatformserving40+propertymanagementcompanies,designing**React**dashboardsand**Node.js** APIs that reduced transaction processing latency from 3s to 1s.
- Architected **microservices** infrastructure using **Docker** containers on **AWS**, enabling horizontal scaling and reducing deployment failures across production environments.
- Implemented **OAuth2** authentication flows and end-to-end encryption for financial transactions, meeting compliance requirements for payment processing systems.
- Led a team of 5+ engineers through sprint planning and code reviews, establishing testing standards that increased code coverage to 85% and reduced post-release incidents.
- Optimized **PostgreSQL** database queries and introduced caching layers with **Redis**, achieving 40% improvement in API response times under peak load.
- Maintained on-call rotation for critical production systems, resolving P1 incidents within SLA targets and documenting runbooks for automated recovery procedures.
- Collaborated with product managers and design teams to deliver 12 new features per quarter, incorporating user feedback through A/B testing frameworks.

Full Stack Developer | ZenBusiness | 01/2021 - 11/2022

- Developed business formation and compliance features for a **SaaS** platform processing 500+ daily business registrations, using **Python Django** and **React**.
- Built and secured **RESTful APIs** with **OAuth2**, reducing data breach risks and ensuring PCI compliance for payment processing workflows.

- Refactored legacy **monolithic architecture** into modular services, improving deployment frequency and enabling independent team workflows.
- Integrated third-party services including payment gateways and state filing systems, automating 200+ hours of manual processing per month.
- Conducted code reviews and mentored 3 junior developers, establishing coding standards and documentation practices across the engineering team.
- Improved platform uptime to 99.9% by implementing comprehensive monitoring with **CI/CD pipelines** and automated rollback mechanisms.

Full Stack Engineer | Northstar Software Development | 11/2020 - 06/2021

- Delivered ATS (Applicant Tracking System) features for enterprise clients using **React**, **Node.js**, and **PostgreSQL**, supporting 10+ client deployments.
- Designed **GraphQL** schemas and resolvers to streamline data fetching, reducing frontend bundle size by 30% and improving page load times.
- Implemented automated testing suites covering 80% of codebase, catching regressions early and accelerating release cycles by 2 days per sprint.
- Collaborated with clients to gather requirements and translate them into technical specifications, maintaining a 95% satisfaction rate on delivered features.
- Optimized database performance through query analysis and indexing strategies, handling datasets exceeding 1M records with sub-second response times.

Software Engineer | Arbisoft | 10/2018 - 08/2020

- Built FixAlert product features for healthcare compliance monitoring using **React**, **Python Flask**, and **MySQL**, supporting 8+ healthcare facility clients.
- Developed real-time alerting systems with WebSocket integration, enabling immediate notification delivery for compliance events across hospital networks.
- Created automated reporting modules that saved 5+ hours of manual work weekly for healthcare administrators managing regulatory submissions.
- Participated in Agile ceremonies including sprint planning, daily standups, and retrospectives, contributing to continuous process improvement.
- Resolved production bugs and performance issues through thorough debugging and log analysis, maintaining platform stability for critical healthcare workflows.
- Documented API endpoints and implementation guides, reducing onboarding time for new team members by enabling self-service learning.
