Summary

Senior Full Stack Engineer with **8 years** of experience designing and delivering enterprise-grade web applications across SaaS, fintech, and real estate platforms. Led end-to-end development of financial systems processing user data securely with **RESTful APIs**, **OAuth2** authentication, and **PostgreSQL** optimization. Built scalable microservices architecture serving thousands of concurrent users. Partnered with product and design teams to ship **40+ features** across mission-critical applications. Seeking to bring full stack expertise to a data integrity-focused team at Precisely. Owns production infrastructure end to end, including on call coverage, deployment automation, and monitoring across distributed services. Comfortable partnering with platform and application teams on reliability work.

Core Skills

Languages: Python, JavaScript, TypeScript, Java, SQL, HTML/CSS

Frameworks: React, Node.js, Django, Spring Boot, Express.js

Databases: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD pipelines, Jenkins, Linux

Tools & Practices: Git, Agile, REST API design, OAuth2, JWT, Data validation, unit testing, GitHub Actions

Work Experience

Senior Full Stack Engineer | Frontdoor | Remote, US | 09/2022 - Present

- Architected and developed a **real estate financial platform** handling sensitive transaction data with **OAuth2** and **JWT** authentication, reducing unauthorized access incidents.
- Built **RESTful APIs** with **Node.js** and **Express** processing mortgage calculations, improving response times from 5s to 1.5s through **PostgreSQL** query optimization.
- Implemented **React**-based dashboard for property managers, enabling tracking of **500+ properties** with real-time data visualization and reporting.
- Containerized microservices using **Docker** and deployed to **AWS ECS**, reducing deployment failures by 40% and improving system reliability.
- Mentored 3 junior developers on **React** best practices, code review standards, and **data validation** techniques.
- Designed and maintained **MySQL** database schema supporting multi-tenant architecture with row-level security for client data isolation.
- Established **CI/CD pipelines** with GitHub Actions, automating testing and deployment workflows across staging and production environments.
- Conducted security audits and implemented **input validation** layers, preventing potential SQL injection and XSS vulnerabilities across 12 API endpoints.

Full Stack Developer | ZenBusiness | Remote, US | 01/2021 - 11/2022

- Developed and maintained business registration features using **Django** and **PostgreSQL**, supporting **40+ types** of entity formations for small business clients.
- Built **RESTful APIs** with **Python** and **Django REST Framework** processing compliance documents, achieving 99.9% uptime during peak filing seasons.

- Integrated third-party **API services** for document filing and state compliance verification using **OAuth2** protocols.
- Implemented **React** components for user-facing filing dashboards, improving user engagement by 25% through streamlined UX flows.
- Participated in on-call rotation responding to production incidents, resolving critical bugs within SLA time frames.

Full Stack Engineer | Northstar Software Development | TX, US | 11/2020 - 06/2021

- Built applicant tracking system features using **React** and **Node.js**, enabling HR teams to manage hiring pipelines for organizations with **200+ employees**.
- Created automated email notification system using **Node.js** and **Redis** queues, reducing manual follow-up tasks by 60%.
- Developed **RESTful API** endpoints for candidate screening workflows with **MySQL** backend, improving recruitment processing efficiency.
- Collaborated with product managers to define sprint requirements and deliver features in 2-week Agile cycles.
- Implemented **input validation** and sanitization across forms, securing user data in compliance with employment regulations.

Software Engineer | Arbisoft | Remote, US | 10/2018 - 08/2020

- Implemented **React**-based admin panels for configuration management, reducing setup time from 30 minutes to 5 minutes per client.
- Developed **FixAlert** SaaS application features using **Python** and **Django**, serving maintenance teams across **100+ client organizations**.
- Built **RESTful APIs** for issue tracking and alert management with **PostgreSQL** backend, streamlining maintenance request workflows.
- Designed database models for multi-tenant alert routing system with efficient indexing strategies for fast query performance.
- Wrote comprehensive unit and integration tests using **pytest**, achieving 80% code coverage across core modules.

Education

Bachelor of Science in Computer Science

University of North Texas | 2014 - 2018
