

Nathan Hershey

Round Rock, TX | nathanhershey047@gmail.com | 937-326-3137
<https://www.linkedin.com/in/nathan-hershey-436209388>

Core Skills

Languages & Scripting: TypeScript, JavaScript, HTML, CSS, SQL, Python, MySQL

Systems & Networking: AWS

Data & Containers: Docker, Kubernetes, Postgres

Education

Bachelor of Science in Computer Science

University of North Texas | 2014 - 2018

Work Experience

FrontDoor, Senior Full Stack Engineer 09/2022 - Present

- Designed and delivered a kernel-level transaction engine handling \$12M daily volume, using **Java**, **Spring Boot**, and **Kafka**, cutting end-to-end latency from 3s to 1s.
- Built an on-call alerting pipeline with **Docker**, **Kubernetes**, and **Prometheus**, reducing mean-time-to-detect incidents by 45%.
- Refactored the user-profile microservices suite to **React** and **TypeScript**, improving front-end load time by 30% and decreasing bounce rate.
- Implemented role-based access control across the platform using **OAuth2** and **PostgreSQL**, eliminating unauthorized access attempts in quarterly audits.
- Guided a cross-functional team of 6 engineers through code-review standards, raising code-coverage from 68% to 92% within four sprints.
- Integrated CI/CD pipelines using **GitHub Actions** and **Helm**, accelerating deployment frequency from twice weekly to daily releases.

ZenBusiness, Full Stack Developer 01/2021 - 11/2022

Senior Full Stack Engineer with **8 years** owning production systems end to end. Owns production infrastructure end to end, including on call coverage, deployment automation, and monitoring across distributed services. Comfortable partnering with platform and application teams on reliability work.

- Created a self-service business formation API in **Node.js** and **Express**, supporting 150k new accounts per month and cutting onboarding time by 25%.
- Migrated legacy data stores to **PostgreSQL**, consolidating 12TB of records and improving query performance by 40%.
- Developed a responsive admin dashboard with **React** and **Redux**, decreasing support ticket resolution time by two days per case.
- Established automated security scans with **Snyk**, catching 18 critical vulnerabilities before production release.
- Participated in on-call rotation, resolving production incidents within an average of 22 minutes, maintaining SLA compliance.

Northstar Software Development, Full Stack Engineer 11/2020 - 06/2021

- Engineered an applicant-tracking SaaS platform using **Java**, **Spring MVC**, and **Thymeleaf**, handling 8k concurrent users during peak hiring cycles.
- Designed RESTful endpoints for resume parsing, reducing processing time from 8s to 2s with **Jackson** and **Kafka** streams.
- Optimized database schema in **MySQL**, cutting storage costs by 15% while preserving data integrity.
- Implemented CI pipelines with **Jenkins**, decreasing build time by 35% and enabling daily releases.

- Conductedperformancetuningsessions,improvingoverallsystemthroughputby20%underloadtesting.

Arbisoft, SoftwareEngineer10/2018 - 08/2020

- DevelopedtheFixAlertmonitoringtoolin**Python**and**Flask****,deliveringreal-timealertsforthreemajorclientinfrastructures.
- Integratedthird-partySMSgatewayusing**Twilio**,achieving99.9%messagedeliveryreliability.
- Builtareusablecomponentlibrarywith**Vue.js**, accelerating UI development across three internal projects.
- Automated deployment to **AWS EC2** with **Ansible**, cutting provisioning time from 45 minutes to 10 minutes.
- Served on-call for critical incidents, achieving a 99.5 % uptime SLA over 18 months.
