Summary

Senior Full Stack Engineer with **8 years** designing, building, and operating mission-critical financial platforms. Owns the real-time mortgage underwriting system, the loan-origination API gateway, and the property-valuation microservice. Proficient in **Java**, **Spring Boot**, **React**, **Docker**, **Kubernetes**. Delivered a 30% reduction in checkout latency while collaborating with product, security, and data teams. Serves on-call rotation, handling incidents end-to-end and performing kernel-level debugging to keep services available. Partners with compliance, analytics, and third-party underwriting groups to align roadmap. Currently focusing on establishing an automated CI/CD pipeline and expanding observability through distributed tracing to boost platform resilience.

Core Skills

Languages & Scripting: TypeScript, JavaScript, HTML, CSS, SQL

Work Experience

FrontDoor, Senior Full Stack Engineer (09/2022 - Present)

- Designed end-to-end loan-origination workflow on **Java**, **Spring Boot**, and **PostgreSQL**, reducing processing time from 4 s to 2 s and improving throughput by 50%.
- Built responsive property-valuation UI with **React** and **TypeScript**, enabling agents to view estimates in under 1 s, increasing user satisfaction scores by 15%.
- Managed on-call rotation for the platform, handling incidents and performing root-cause analysis with **Kubernetes** logs, decreasing mean-time-to-recovery from 45 min to 20 min.
- Collaborated with security and compliance partners to implement **OAuth2** and **audit logging**, achieving zero critical findings in the annual audit.
- Integrated **Docker**, **Kubernetes**, and **GitLab CI** to automate deployments, cutting release cycles from weekly to daily.
- Mentored a team of 4 junior engineers, establishing **Git** code-review standards and improving code-quality metrics by 25%.

ZenBusiness, Full Stack Developer (01/2021 - 11/2022)

- Developed RESTful APIs in **Node.js** and **Express**, serving over 200k daily requests and improving response latency by 20%.
- Created an admin dashboard using **React** and **JavaScript**, streamlining account management and reducing manual steps by 30%.
- Implemented an automated testing suite with **Jest** and **Cypress**, raising test coverage to 85% and catching regressions before release.
- Migrated legacy data pipeline to **AWSS3** and **Lambda**, cutting storage costs by \$12k annually.
- Partnered with product and design team to launch a **subscription billing** feature using **Stripe**, generating \$250k in new revenue within the first quarter.

Northstar Software Development, Full Stack Engineer (11/2020 - 06/2021)

- Engineered applicant-tracking microservice in **Java** and **Spring**, handling 150k job applications per month and improving processing reliability.
- Designed front-end UI with **Angular** and **TypeScript**, enhancing recruiter workflow and decreasing task completion time by 18%.
- Setup CI pipeline using **Jenkins** and **Maven**, automating builds and tests, reducing integration failures by 40%.
- Integrated **PostgreSQL** replication on **AWS**, achieving 99.9% uptime.
- Coordinated with HR partner to customize reporting modules using **SQL** and **Excel**, delivering tailored analytics for 12 enterprise clients.

Arbisoft, Software Engineer(10/2018 - 08/2020)

- Implemented REST APIs with **Flask** and **SQLAlchemy**, enabling mobile app integration and handling 50k daily calls.
- Conducted code reviews and mentored interns, using **Git** to enforce standards, raising overall code-quality scores by 15%.
- Containerized services with **Docker** and **GitLab**, simplifying deployment across staging and production environments.
- Developed front-end components with **Vue.js** and **JavaScript**, improving UI responsiveness across browsers.
- Built bug-tracking system *FixAlert* using **Python** and **Django**, supporting 10k active users and decreasing issue-resolution time by 25%.

Education

Bachelor of Science in Computer Science

University of North Texas | 2014 - 2018
