Summary

Senior Full Stack Engineer with **8 years** of experience in full-stack Web application development and data pipeline architecture. Owns Frontdoor's real estate financial platform, developing **Python**-based solutions for mortgage calculations and payment processing serving thousands of monthly transactions. Built scalable SaaS systems at ZenBusiness and contributed to enterprise ATS platforms at Northstar Software Development. Proficient in **React**, **Node.js**, **PostgreSQL**, **Elasticsearch**, **AWS**, and **Docker**, having led cross-functional teams across 5+ members and delivered 40+ production projects. Focusing on data-intensive architectures and pipeline optimization for organizational growth.

Core Skills

Programming Languages: Python, JavaScript, TypeScript, Java, SQL, HTML, CSS

Frameworks & Libraries: React, Node.js, Django, Spring Boot, Express.js, Next.js, jQuery

Databases & Storage: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, S3

Cloud & DevOps: AWS, GCP, Docker, Kubernetes, Git, CI/CD, Linux

Data & APIs: RESTful APIs, GraphQL, Big Data, Data Pipelines, Hadoop, Spark

Work Experience

Senior Full Stack Engineer | Frontdoor | Remote, US | 09/2022 - Present

- Architected and delivered a real estate financial platform end-to-end using **Python** and **React**, processing mortgage calculations and payment workflows for 5000+ monthly transactions.
- Designed scalable ETL **data pipelines** with **Python** and **Spark** to process millions of records daily, implementing automated data quality checks and error handling.
- Optimized database queries and implemented caching strategies with **Redis**, reducing API response times from 3s to 1s for property valuation endpoints.
- Led a cross-functional team of 5+ engineers to migrate legacy systems to **AWS** cloud infrastructure, improving deployment frequency and system reliability.
- Designed and implemented **RESTful APIs** with **OAuth2** authentication, securing financial data exchange between client applications and backend services.
- Monitored pipeline health using **CloudWatch** and Datadog dashboards, identifying bottlenecks and optimizing job scheduling for 30% performance gain.
- Collaborated with data scientists to integrate ML models into production workflows for entity resolution and data enrichment tasks.
- Built and maintained **CI/CD pipelines** using **GitHub Actions**, automating testing and deployment workflows for 40+ microservices.

Full Stack Developer | ZenBusiness | Remote, US | 01/2021 - 11/2022

- Developed and maintained a business formation and compliance platform using **React**, **Node.js**, and **PostgreSQL**, handling LLC, corporation, and partnership filings across all 50 states.
- Created automated workflows using **Python** and Celery to handle document generation, registered agent services, and compliance alerts, reducing processing time from 5 days to 2 days.
- Built **RESTful APIs** with **OAuth2** and JWT authentication to support the client-facing dashboard and internal tooling, serving over 5000 active business clients.
- Deployed containerized applications with **Docker** on **AWS ECS**, achieving 99.9% uptime and handling 10x traffic spikes during peak registration periods.
- Worked closely with product and design teams to ship 20+ new features, enhancing user experience and driving client retention.

Full Stack Engineer | Northstar Software Development | TX, US | 11/2020 - 06/2021

- Developed a full-stack ATS platform using **React** and **Node.js**, enabling 100+ recruiting teams to manage candidates, job postings, and hiring pipelines.
- Refactored frontend components and optimized backend queries, reducing application load time by 40% and improving hiring workflow efficiency for Northstar clients.
- Built **RESTful APIs** for candidate profile management, job postings, interview scheduling, and offer letter generation with **OAuth2** security.
- Designed and maintained **MySQL** database schemas for the ATS, managing resume parsing, candidate tracking, and reporting workflows.
- Integrated third-party job boards and HR systems through custom API connectors, expanding job distribution reach by 25%.

Software Engineer | Arbisoft | Remote, US | 10/2018 - 08/2020

- Built FixAlert, an incident management platform using **Python** and **Django**, serving 200+ enterprise clients for automated alerting and incident response.
- Implemented automated alerting engine with configurable thresholds and escalation policies, reducing alert fatigue by 60% for on-call engineers.
- Developed real-time notification systems with WebSocket protocols, alerting teams of critical incidents within 1 second of detection.
- Integrated Slack, PagerDuty, and email notification channels into the platform, improving incident response coordination for operations teams.
- Participated in code reviews and mentored junior developers on **Python** best practices and Django framework patterns.

Education

Bachelor of Science in Computer Science

University of North Texas | 2014 - 2018
