Summary

Senior Full Stack Engineer with **8 years** delivering end-to-end web solutions for fintech, SaaS, and real-estate platforms. Owns a real-time mortgage analytics platform, a self-service incorporation wizard, and a candidate screening dashboard. Frequently combines **React**, **Node.js**, **AWS**, **PostgreSQL** and **Docker** to build resilient services. Led a migration that reduced checkout latency by 35% while partnering with product, security and data teams. Currently Works on scaling microservices for health-tech applications and expanding on-call ownership of kernel-level performance profiling. Provides on-call support for critical incidents and mentors junior engineers to improve code quality across squads.

Core Skills

Languages and Frameworks: JavaScript

Backend Development: Node.js, Express, Java, SpringBoot, REST, GraphQL

Frontend Development: React, Angular, TypeScript, Next.js, Bootstrap, HTML/CSS

Cloud & DevOps: AWS, Docker, GitHub Actions, eBPF, Redis

Data Management: PostgreSQL, MySQL, SQL, Python, AWS Lambda

Work Experience

Education

Bachelor of Science in Computer Science

University of North Texas | 2014 - 2018

FrontDoor

Senior Full Stack Engineer | Remote, US | 09/2022 - Present

- Designed and delivered a multi-tenant mortgage analytics service using **Node.js**, **Express**, and **PostgreSQL**, handling over 1 million daily requests and cutting average response time from 1.8s to 0.9s for internal stakeholders.
- Implemented end-to-end CI/CD pipelines with **Docker** and **GitHub Actions**, reducing deployment lead time by 40% and enabling on-call engineers to roll back releases within minutes across all environments.
- Refactored legacy billing microservice into a **Spring Boot** based **Java** service, introducing **Kafka** event streaming and achieving a 25% reduction in transaction failure significantly.
- Led on-call rotation for the payments domain, diagnosing production incidents within minutes and coordinating fixes that restored service level agreements for 99.9% uptime daily.
- Architected a feature flag framework using **Launch Darkly** and **Redis**, allowing product team to toggle new functionalities without code deployments and decreasing release risk for critical features.
- Optimized database queries in **PostgreSQL** by adding indexes and partitioning tables, resulting in a 3x speedup for reporting dashboards used by finance analysts daily.
- Collaborated with UX designers to implement accessible components in **React**, achieving WCAG AA compliance for the main dashboard and improving user satisfaction scores by 12% across the platform.
- Introduced kernel-level profiling using **eBPF** to trace latency hotspots, enabling the team to pinpoint and resolve performance regressions before customer impact in production services and maintains system stability.

ZenBusiness

Full Stack Developer | Remote, US | 01/2021 - 11/2022

- Built a self-service incorporation wizard with **React** and **TypeScript**, reducing manual support tickets by 40% and shortening onboarding time from 48 hours to 12 hours for new customers across the platform.

- Integrated third-party payment gateway using **Node.js** and **Stripe API**, handling over \$2 M in monthly transactions with PCI-compliant tokenization securely for the platform and ensuring customer trust through reliable security.
- Created RESTful APIs in **Express** to expose business logic, achieving 99.5% uptime and supporting mobile app integration for over 150,000 users across iOS and Android platforms with consistent metrics.
- Implemented server-side rendering with **Next.js** to improve SEO, increasing organic traffic by 22% and reducing bounce rate by 15% for the company website and enhancing lead generation metrics.
- Automated data pipelines using **Python** scripts and **AWS Lambda**, cutting nightly batch processing time from 2 hours to 20 minutes for financial reporting and ensuring near-real-time availability across departments company-wide.
- Mentored junior developers on Git best practices and code reviews, improving merge request quality and reducing rework by 30% across the team while accelerating feature delivery timelines significantly.

Northstar Software Development

Full Stack Engineer | TX, US | 11/2020 - 06/2021

- Developed a candidate screening dashboard using **Angular** and **Bootstrap**, enabling recruiters to filter 10,000+ profiles daily with custom rule sets efficiently and accurately through dynamic UI components that.
- Implemented secure authentication with **OAuth2** and **JWT**, protecting sensitive applicant data and complying with GDPR requirements across the platform while maintaining high performance for real-time search operations and ensuring user trust.
- Created REST APIs in **Node.js** to expose job posting data, supporting integration with three external HRIS partners and handling 500 req/s peak load smoothly and reliably during recruitment campaigns.
- Optimized front-end performance by lazy-loading modules and compressing assets, decreasing page load time from 4.2 s to 1.9 s on average for all users across devices and network conditions improving engagement.
- Provided on-call support for the ATS module, resolving critical incidents within 15 minutes and maintaining 99.7% availability during peak hiring seasons for global clients and ensuring continuous recruitment operations.

Arbisoft

Software Engineer | Remote, US | 10/2018 - 08/2020

- Contributed to the FixAlert product by developing **Java** microservices with **Spring Boot**, improving incident detection speed by 25% while partnering with product, security and data teams and reducing false positives by 15% overall.
- Implemented real-time notification system using **WebSocket** and **Redis**, delivering alerts to dashboards within 200 ms latency for critical operations and ensuring rapid response times across multiple clients globally maintaining.
- Wrote comprehensive unit and integration tests with **JUnit** and **Mockito**, achieving 92% code coverage and reducing regression bugs by 40% throughout the development cycle and supporting stable releases.
- Collaborated with UI team to integrate **React** components, delivering a unified interface that decreased user onboarding time by 30% for new customers and improved adoption rates across the platform.
- Optimized database queries in **MySQL** by adding indexes, resulting in a 2× speedup for report generation used by analytics team daily and supporting real-time insights for executives company-wide.
- Provided on-call support for production incidents, resolving critical issues within 30 minutes and maintaining 99.8% service availability for key client applications and ensuring continuous business operations throughout downtime periods.
