

Nathan Hershey

Round Rock, TX | nathanhersh047@gmail.com | 937-326-3137 | <https://www.linkedin.com/in/nathan-hersh047>

Summary

Full stack engineer with **8 years of experience** building **Python** backend services, **Node.js** APIs, and **React** frontends across industries including real estate, business services, and HR technology. Adept at translating business requirements into reliable web-based solutions, with strong proficiency across the full development lifecycle from database design through deployment. Collaborative team player with a track record of delivering maintainable code and iterative improvements based on user feedback.

Core Skills

Languages: Python, JavaScript (ES6+), TypeScript, PHP, SQL, Bash

Frameworks & Libraries: **Django**, Django REST Framework, **FastAPI**, **React**, **Node.js**, Express, Laravel, WordPress, Vue.js

Databases: **PostgreSQL**, MySQL, **Redis**, MongoDB, SQLite

Infrastructure & DevOps: Docker, **CI/CD** (GitHub Actions), AWS (EC2, S3, Lambda), Linux servers, NGINX

Tools & Practices: Git, RESTful API design, OAuth2/JWT authentication, PHPUnit, Jest, Cypress, SASS/LESS, WebSockets

Work Experience

Senior Full Stack Engineer | Frontdoor | Remote | 09/2022 - Present

- Led development of the property listing search system using **Python** FastAPI and **React**, handling complex multi-field filtering with query response times under 150 ms during peak traffic.
- Designed and maintained **PostgreSQL** schemas with materialized views and indexing strategies, cutting complex report generation time from several minutes to around 8 seconds.
- Built **Node.js** microservices for real-time notification delivery, integrating WebSocket connections to keep agents and customers updated on status changes without page refreshes.
- Developed backend APIs with **Python** Django REST Framework, implementing role-based access control and JWT authentication across 12 internal tools used by the operations team.
- Migrated legacy Angular frontend components to **React** with TypeScript, improving page interactivity and reducing bundle size by roughly 40% after tree-shaking and lazy loading.
- Set up **Redis** caching layers for frequently accessed property and agent data, which cut database load noticeably during high-traffic listing events.
- Configured **Docker** containers and **CI/CD** pipelines in GitHub Actions, cutting deployment time in half and eliminating manual server setup for new service rollouts.
- Worked closely with QA engineers and product managers during sprint planning and code reviews, contributing to consistent two-week release cycles and a measurable drop in post-release bug reports.

Full Stack Developer | ZenBusiness | Remote | 01/2021 - 11/2022

- Built and maintained **WordPress** multisite installations serving business formation and compliance content across 15+ country-specific domains, each with custom theme overrides and localized routing.
- Extended **Laravel** backend services for internal tooling, implementing background job queues to handle automated filing and document generation workflows used by operations staff daily.
- Developed and secured **RESTful APIs** with OAuth2 and JWT flows for third-party integrations, reducing manual data entry for clients by connecting filing platforms with partner services.
- Created interactive **React** dashboards for internal metrics tracking, pulling data from multiple endpoints and rendering real-time updates with minimal re-renders.
- Automated internal workflows with **Python** scripts and shell tooling, replacing repetitive manual tasks that were consuming several hours per week across the team.

- Collaborated with designers and content managers on responsive page layouts and brand-consistent components, ensuring mobile compatibility and accessibility compliance across 40+ landing pages.

Full Stack Engineer | Northstar Software Development | Remote | 11/2020 - 06/2021

- Developed frontend features for an ATS (applicant tracking system) using **React** and **Node.js**, handling job posting workflows, candidate profiles, and interview scheduling interfaces.
- Built **RESTful APIs** to aggregate job board listings and resume-parsing results, normalizing data from multiple sources into a consistent schema for recruiter searchability.
- Designed and optimized **MySQL** database schemas for high-volume candidate record lookups, adding composite indexes that improved search query response times noticeably for large datasets.
- Integrated **OAuth2** authentication for third-party job board API connections, allowing recruiters to import postings without sharing credentials across platforms.
- Participated in daily stand-ups and code reviews with a team of 5 engineers, maintaining clean Git history and ensuring feature branches were properly reviewed before merge.

Software Engineer | Arbisoft | Hybrid | 10/2018 - 08/2020

- Built notification management features for FixAlert using **Python** Django and JavaScript, supporting multi-channel delivery (SMS, email, push) across 40+ enterprise client accounts.
- Authored unit and integration tests using pytest and Jest, establishing test coverage baselines that gave the team confidence during refactoring cycles.
- Worked with product managers to define feature scope and acceptance criteria for quarterly releases, translating ambiguous requirements into concrete technical deliverables.
- Deployed containerized services with Docker, maintaining Docker Compose configurations for local development parity across the engineering team.
- Built internal admin tools in **React** for operations teams to configure alert rules and view delivery logs, reducing the support ticket volume for routine configuration changes.
- Set up **CI/CD** pipelines with GitHub Actions to automate test runs and deployments, ensuring every pull request passed a full suite before merge.

Education

BS Computer Science | University of North Texas | 2014 - 2018
