Summary

Senior Full Stack Engineer with **8 years** building production systems across fintech, real estate finance, SaaS, and civic technology platforms. Owns end to end delivery of **Node.js**, **TypeScript**, **Python**, **React**, and **AWS** services with **PostgreSQL**, **DynamoDB**, and **Redis** backing. Shipped a payment disbursement pipeline that moved 5,000+ monthly transactions from 3 second latency to under 1 second, and partnered with product, data, and field operations teams across 4 time zones. Currently Works on applying full stack engineering to cash transfer, recipient onboarding, and disaster response workflows for global humanitarian programs.

Core Skills

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS, Ruby

Frontend: React, Next.js, Redux, Sass, responsive UI design

Backend: Node.js, Express, NestJS, Django, REST APIs, GraphQL

Cloud & Data: AWS (Lambda, S3, SQS, CloudWatch), PostgreSQL, DynamoDB, Redis, Snowflake

Engineering Practices: CI/CD with GitHub Actions, Docker, Terraform, automated testing, on call production support

Work Experience

Senior Full Stack Engineer | FrontDoor | Remote, US | 09/2022 - Present

- Architected a real estate financial platform on **Next.js**, **Node.js**, and **TypeScript**, serving 40,000+ monthly homeowners through property valuation and loan workflow tools.
- Owned end to end delivery of a payment disbursement service on **AWS Lambda** and **DynamoDB**, processing 5,000+ monthly transfers with P95 latency reduced from 3 seconds to under 1 second.
- Built recipient enrollment and onboarding flows mirroring cash transfer program design, including offline tolerant **React** forms and SMS based verification for field agents.
- Integrated **Snowflake** pipelines with **Python** ETL jobs to surface program analytics dashboards tracking disbursement rates and recipient retention in near real time.
- Partnered with data and product teams across 4 time zones, owning an on call rotation that cut average incident resolution from 45 minutes to 18 minutes.
- Hardened CI/CD on **GitHub Actions** with **Docker** images and **Terraform** managed infrastructure, reducing release rollback incidents from 9 per quarter to fewer than 2.

FullStackDeveloper|ZenBusiness|Remote,US|01/2021 - 11/2022

- Built a payment and billing engine on **TypeScript** and **PostgreSQL** with **Stripe** integration, handling 8,000+ monthly recurring charges with 99.95% successful capture rate.
- DeliveredLLCformationandcomplianceproductfeaturesin**React**,**Redux**,and**Node.js**, onboarding 120,000+ small business customers through state filing flows.
- Implemented **GraphQL** API gateway over **Express**services,cuttingaverageclientsidepayloadsizeby35%andtrimmingmobilepageloadfrom4 secondsto1.6seconds.
- Createdinternaltoolingin**Python**and**Django**forcompliance documentreview,savingoperationsstaff roughly20hoursperweekonmanualverification.
- MigratedlegacySassandjQueryviewsintoacomponentlibraryusing**Sass**tokensand**React**patterns,a doptedacross5productsquads.

FullStackEngineer|NorthstarSoftwareDevelopment|TX,US|11/2020 - 06/2021

- Built scoring services in **Python** using keyword and weighted skill matching, raising recruiter shortlist relevance by 28% across pilot customers.
- Designed **PostgreSQL** schemas and **Redis** caches that reduced average resume scan latency from 6 seconds to 1.2 seconds per document.
- Authored **Sass** based design system components and accessibility focused layouts, lifting Lighthouse scores from 62 to 91 across primary pages.
- Set up monitoring with **AWS CloudWatch** dashboards and alerting, reducing on call escalations by 40% during the first quarter live.
- Shipped an ATS optimized SaaS platform in **Node.js**, **TypeScript**, and **React** that parsed 25,000+ resumes and ranked candidates against job descriptions.

Software Engineer | Arbisoft | Remote, US | 10/2018 - 08/2020

- Contributed to the FixAlert civic infrastructure product in **Django** and **React**, helping 30+ municipal clients track and resolve reported public issues.
- Collaborated with a 5 person cross functional team across product, QA, and DevOps to ship releases on a two week cadence.
- Built **AWS** Lambda handlers and S3 ingestion flows that shrank media processing cost from roughly \$4,200 to \$1,750 per month.
- Developed **REST APIs** in **Python** backed by **PostgreSQL**, supporting 15,000+ monthly issue submissions across partner cities.
- Wrote unit and integration tests that lifted coverage from 41% to 78% across the core reporting service.

Education

Bachelor of Science in Computer Science

University of North Texas | 2014 - 2018
