Summary

Senior Full Stack Engineer with **8 years of experience** building **SaaS platforms**, cloud-native applications, and enterprise-grade APIs across real estate, compliance, and business services domains. Demonstrated ability to translate complex technical concepts into clear, actionable guidance for both technical and executive audiences. Skilled in **REST API design**, **cloud architecture**, and delivering solutions that meet rigorous enterprise requirements for security and compliance. Currently exploring solutions engineering roles where technical depth and customer-facing expertise can drive strategic business outcomes.

Core Skills

Languages: Python, JavaScript, TypeScript, Go, SQL

Frameworks: React, Node.js, Express, Next.js, Spring Boot, Django

Cloud & DevOps: AWS (EC2, Lambda, S3, RDS), Azure, Docker, Kubernetes, CI/CD pipelines

Data & APIs: PostgreSQL, MongoDB, Redis, GraphQL, REST APIs, OAuth2, JWT

Tools: GitHub Actions, JIRA, Datadog, CloudWatch, Terraform

Work Experience

Senior Full Stack Engineer | **Frontdoor** | **Remote** | **09/2022 - Present**

- Owned the core claims intake workflow for the home services warranty platform, handling around 2,000 daily submissions from homeowners and service contractors.
- Designed and shipped **RESTful APIs** with **OAuth2** authentication for third-party contractor integrations, enabling partners to submit claims and retrieve status updates without manual intervention.
- Collaborated with product managers and UX designers to rebuild the contractor dashboard, reducing average session duration by roughly 25% and cutting support tickets related to navigation confusion.
- Migrated the legacy on-premises data pipeline to **AWS Lambda** and SQS, moving batch processing from a 4-hour overnight window to near-real-time job completion.
- Worked with security and compliance teams to implement role-based access controls across the platform, supporting multi-tenant data isolation requirements for enterprise contract partners.
- Led technical discovery sessions with enterprise clients during onboarding, documenting API requirements and integration timelines to align implementation work with contract milestones.
- Introduced automated contract testing suites that covered 40+ critical API endpoints; reduced production incidents tied to integration bugs from a handful per quarter to near zero.
- Mentored three junior engineers on **React** component architecture and code review practices, establishing patterns the team still uses as reference implementations.

Full Stack Developer | **ZenBusiness** | **Hybrid** | **01/2021 - 11/2022**

- Built and maintained features on the business formation and compliance SaaS platform, serving over 300,000 registered businesses across all 50 states.
- Developed internal tooling that automated state filing document generation, cutting the manual effort for compliance operations from several hours per filing to under 10 minutes.
- Partnered with customer success managers to triage and resolve escalated client issues during onboarding, directly contributing to a noticeable improvement in first-month retention rates.
- Designed GraphQL resolvers that aggregated data across multiple microservices, replacing a fragile proxy layer that had caused recurring downtime during high-traffic periods.
- Configured **CI/CD pipelines** in GitHub Actions that automated staging deployments, shrinking the release cycle from two weeks to roughly three days.

- Documented platform APIs and integration guides for external developer partners, reducing support inquiries from the partner team by about 30% within a quarter.

Full Stack Engineer | Northstar Software Development | Hybrid | 11/2020 - 06/2021

- Developed and maintained **full stack modules** for a multi-tenant ATS product used by mid-market HR teams, including candidate search, job posting management, and interview scheduling features.
- Optimized database queries handling resume parsing and storage, cutting average load time for candidate profiles from around 4 seconds to under 1 second.
- Collaborated directly with client HR administrators during UAT cycles, triaging feedback and pushing fixes within negotiated SLA windows.
- Built webhook integrations with major job boards and background check providers, enabling customers to sync postings and candidate data without manual exports.
- Refactored the legacy jQuery frontend into modular **React** components, laying the groundwork for further modernization work the team continued after my tenure.

Software Engineer | Arbisoft | Remote | 10/2018 - 08/2020

- Contributed to FixAlert, a platform for managing compliance alerts and notifications, working across the **Django** backend and **React** frontend layers.
- Built automated email and SMS notification pipelines using Celery and Twilio, handling around 5,000 alerts per day for enterprise clients in regulated industries.
- Participated in client-facing product demos and requirements gathering sessions, helping translate stakeholder needs into concrete feature specs.
- Wrote integration tests covering the core notification delivery paths, achieving roughly 85% code coverage across the backend module.
- Assisted with deployment orchestration using Docker and AWS ECS, reducing environment provisioning time from a full day to under an hour.
- Reviewed pull requests and provided technical feedback to two junior team members during sprint cycles.

Education

BS Computer Science | University of North Texas | 2014 - 2018
